Take the easy road

At Aseptconn, a supplier of components and products for sterile fluid transfer technology, you profit from our many years of experience in the pharmaceutical sector.

We offer you maintenance kits that will help you to improve the maintenance of your installations. Not only will you save time, but you will also be able to reduce your stock levels.

What is the Maintenance Kit?

Maintenance managers are often forced to contact several different suppliers when they want to replace wearing parts on their production line. That's why Aseptconn has developed customised maintenance kits containing all the parts needed for each of your skids. We tailor each kit to your needs

What are the benefits ?

Maintenance kits have several advantages, such as

- Reference to a **single supplier** when ordering parts for replacement
- Using a **single part reference** for each maintenance kit, which will contain all the necessary material
- **Reducing your stock levels** thanks to our scheduled deliveries
- **Reducing order management costs**, estimated at CHF 250.00, by placing only 1 order for all the necessary material.
- **Easy management of products** with our detailed labelling
- Our certificate management system which ensures **full traceability of all products**.

What do we guarantee ?

One of Aseptconn's values is to react quickly when a request is made. That is why we guarantee a short response time, the best delivery time and quality products.

"Our range of products for the pharmaceutical industry is almost unlimited, so don't hesitate to contact us"
