Maintenance service

At Aseptconn, a local company, we want to anticipate any problems related to the maintenance of your production lines. Therefore we offer regular and preventative maintenance of your installations.

We would be happy to visit your site to assess your needs and schedule your maintenance requirements in advance, possible thanks to our fast and high-quality services

Why should you maintain your facilities regularly?

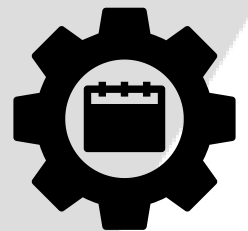

Tanks, circulation pumps, filling funnels, etc., wear out over time. This wear and tear leads to various problems such as :

- Failure to maintain the surface condition
- Product contamination
- The risk of specific corrosion
- Degradation of surface characteristics.

What do we do?

In order to prevent these problems, we offer you an installation maintenance service.

- We meet you at your site quickly to assess the condition of your installations
- We advise you on the best way to restore your facilities
- We draw up a work plan to meet your deadlines.

How?

Our maintenance service includes several services:

- Maintenance-related travel is at our expense
- Checks and requalification certificates are provided, if necessary, when the equipment is handed over:
 - The welding handbook in case of repairs
 - The ruggedness check carried out by our qualified personnel as well as endoscopic checks
 - The 2.2 certificate of the work carried out
 - Material certificates by mass spectrometer
- We adapt to your quality requirements
- Maintenance of the material using various techniques:
 - Polishing or electro-polishing of surfaces in contact with the products
 - Restoration of conformity in the event of defects
 - Guarantee of different surface conditions and ruggedness with Ra. from mirror polish to 0.8µm
