Dummy - fake filters for the crankcase filtration

At Aseptconn, a supplier of components and products for sterile fluid transfer technology, we design customised dummies.

In order to clean your crankcases properly in a minimum of time and using a minimum of water, we design dummies for you that are tailored to your needs and quality requirements

What is a Dummy?

Dummies are used for cleaning production lines. They are used to replace the filter cartridges in the crankcase filtration connected to the mixing tanks. The dummy is completely watertight and improves the cleaning of the crankcases

What are the benefits?

Dummies have several advantages, such as

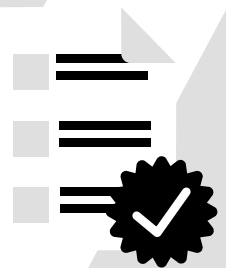

- Reduction in the amount of cleaning fluid required
- Reduction in the time needed to fill the crankcases
- Improved cleaning of the crankcases due to the turbulence created around the dummy
- Possibility of integrating the crankcase filtrations with the rest of the production plant during in-line cleaning.

What do we do?

Our engineering department will custom design the right dummy for your liquid filtration system. We will consider into account your needs and quality requirements such as

- Hollow or solid dummies
- ISO, FDA, ASME certifications
- Materials: stainless steel, POM, PP, etc.
- Certificates of conformity

" Our range of products for the pharmaceutical industry is almost unlimited, so don't hesitate to contact us "
