Customised products

At Aseptconn, a supplier of components and products for sterile fluid transfer technology, you profit from our many years of experience in the pharmaceutical industry.

We offer a bespoke manufacturing service to answer the requirements of the most specific projects. Our working methods are flexible and responsive. It is sometimes difficult to find specific products on the market, so our qualified engineers design them for you. This allows us to adapt to your requirements and needs.

What do we do?

Our engineering department works with you to define the product that best suits your application and the constraints that will be imposed on it. Our extensive knowledge of the pharmaceutical world and our ability to listen enables us to advise you and guide you towards the most suitable solution.

Our offer

We offer conception, calculation, design, construction and manufacturing of custom-made parts. We adapt to YOUR quality requirements:

- We design your projects according to ISO, DIN, ASME BPE standards
- We provide you with inspections and qualification certificates upon delivery:
 - Welding certificate
 - Ruggedness test by our qualified personnel as well as endoscopic test
 - The 2.2 certificate of the work carried out
 - Material certificates by mass spectrometer
- We adapt to your quality requirements:
 - Polishing or electro-polishing of surfaces in contact with the products
 - Guaranteed surface quality and ruggedness with Ra. from mirror polish to 0.8µm

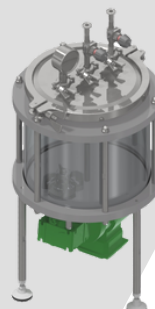

What we have already achieved

Special carts **Stainless steel tanks**

Dispensing systems

Mixer
