Project partners

At Aseptconn, we put our many years of experience in the pharmaceutical industry at your service.

Leakage and contamination problems are one of the main causes of production line stoppages. Therefore, it is important to take measures at every stage of production to avoid these incidents. At Aseptconn, we have made it our mission to help you in each one of these steps, thanks to the various services and products we offer

The most common production line problems

Do you know the 5 most common problems encountered by maintenance teams on production lines?

Here are the top 5

1#: 54% From internal or external valve leaks

2#: 22% From SEP (Sterilisation In Place) and Temperature Probe problems

3#: 12% Due to alignment, slope, drainability problems related to Tri-Clamp component assemblies

4#: 6%: Result from problems with steam traps and check-valves

5#: 6%: Result from problems with manholes and other viewing windows.

What can we do about it?

Advice from the experts

Design of the production line

At this stage, the product choice, to be included in the production line, is very important.

For this reason, our experts will offer you standard or customised solutions best suited to your needs.

Training

Production line maintenance

The maintenance team is faced with many challenges.

That is why we provide maintenance and production teams with free GMP training

Solution

Leakage and/or contamination problems

Our experts will visit the site to assess the leak or contamination and find the source.

We then offer you a solution tailored to your needs and quality requirements

Our range of products for the pharmaceutical industry is almost unlimited, so don't hesitate to contact us.
