Dosing and filling systems and dosing components

We at Aseptconn AG are pleased to inform you that we have added ViscoTec products to our distribution.

ViscoTec is an innovative dispensing system suitable for highly viscous, solids-laden, abrasive and shear-sensitive liquids. The precise, reliable, fast and sophisticated technology enables a wide range of applications in the pharmaceutical, biotech, chemical, food and cosmetic industries.

Products

We offer high-precision dispensing technology for industrial and pharmaceutical applications. We adapt our customized products to the material you are processing and integrate them into your production process.

Dosing system

Preparation system

Emptying system

Power supply system

Dosing pumps

Filling pump

Microdosers

Sensors and monitoring

The technology is based on the endless piston principle. It is a volumetric dosing system. An eccentric movement rotor and a stator adapted to the operating conditions ensure variable-speed dosing with very high precision.

This dosing system can be installed in filling machines both in the autoclavable version and in the CIP version with delivery times of a few days. The system has the advantage that there are no mechanical blockages: This significantly reduces the problem of machine downtimes as well as repair costs and production times.

" Our range of products for the Pharma field is almost unlimited, so don't hesitate to contact us "
