Heatable silicone hose

Aseptconn is a leading supplier of components and products in the field of liquid sterile technology. We are happy to put our many years of experience in the pharmaceutical sector at your disposal.

We offer flexible hoses for the pharmaceutical and biopharmaceutical industries that can transport heat-sensitive liquids where a constant temperature must be maintained throughout transport. The hoses are manufactured specifically to your requirements and specifications.

What are they used for?

These hoses are mainly designed for two applications.

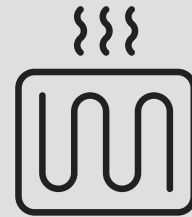

Maintaining the heat:

The transport of heat-sensitive liquids that require a constant temperature ($\pm 10^{\circ}\text{C}$).

Preheating:

This hose can also be used for product preheating processes.

Main features:

Materials

Construction

Inner hose made of silicone, suitable for the food and pharmaceutical industries.

Reinforcement

Polyester fabric layers for optimum durability.

Outer shell

Transparent, tasteless and odorless silicone that ensures a smooth, shiny surface.

Ø Inner [mm]	Recommended working pressure at 20°C [bar]	Minimum burst pressure at 20°C [bar]	Vacuum resistance [bar]
19	10	30	-0.6
25	10	30	-0.6
32	10	30	-0.6
38	10	30	-0.6
50	10	30	-0.6
65	10	30	-0.6

" Our range of products in the pharmaceutical sector is almost unlimited. So please do not hesitate to contact us "
